manufacture and	-2-	
100	Carge Vessel arrived in ballast and loaded approximately mime thousand toms light diesel oil for discharge in Gdymia, Poland,	25
•	Weather Average daytime temperature was 35°F and at might 27°F. Some ice was visible in harbor, carried by winds and current from along the coast to the morth.	
X1 [Pilotage Pilot boarded vessel at anchorage labeled designator A at from a small motor launch manned by five armed guards. Quarantime doctor and a guard came aboard with pilot. Pilot spoke, in addition to his native tongue, Swedish and English. He was an older man who has been a pilot	25
7 x.	at subject port for many years and his services were satisfactory.	25
X1 X1 X1	Boarding Inspection Vessel was underway from outer anchorage at and reached inner harbor anchorage, labeled designator B, After a brief delay vessel lifted anchor and tied up at berth labeled designator C. Boarding party composed of 25 searchers with sidearms and two officers came aboard at and conducted a careful search. Radio, guns and ammunition, cameras, flares, line-throwing gun, and currency were sealed. Vessel carried no radar, and searchers showed interest in being ab-	
8.	solutely certain that no radar equipment was left unsealed aboard vessel. Berth and Cargo Operations Vessel's berth was one of three used for transfer of petroleum products along the south side of the New Petroleum Basin. Wharf was pre-World War II construction with stone surface and pipelines running beneath the surface. Vessel loaded cargo at rate of approximately 350 tons per hour. Vessel at adjoining berth labeled D was being loaded at the same time.	
	Hydrography Harbor and channels are silting, and the depth of water is now insufficient for large merchant tankers and freighters in the innermost extensions of the basins, especially alongside the wharves. Depth in the New Petroleum Basin at designator E and in the Petroleum Basin at designator J is insufficient for deep draft vessels. Depth is barely sufficient for large merchant vessels at designator D. Silting has also reduced usefulness of berth at designator G, where only shallow draft coastal passenger vessels can be berthed. Vessel fully loaded on departure was drawing 26° 1°, and low water at harbor entrance was estimated to be no more than 26°. Vessel's screws raised mud and sand in its outbound passage through channel labeled designator H. East and northeast winds raise swells in and around harbor that may adversely affect navigation.	
10.	Surveillance Five sentries on the wharf armed with rifles maintained a 24-hour surveillance on vessel. Two sentries were stationed at the bow, two at the stern, and one at gangway to check passes of crew members going ashore. Port administration building is located at designator I.	
11.	Merchant Shipping Present A Finnish tanker of approximately 12 thousand tons was loading at berth labeled designator D. Vessel's name was a Norwegian-type; she was operating under time charter to the Polish government. A Soviet tanker of approximately six thousand tons was loading at berth labeled designator J. The usual practice of minimizing formalities and expediting loading of the Soviet tanker was observed.	
12.	Naval Vessels Present Seven Rumanian destroyer and escort-type naval vessels of approximately two thousand tons were tied up along the inner harbor (west) side of the East Breakwater labeled designator K. Two of the seven vessels had two stacks; all were painted dark blue. No armament, special equipment, or other identifying features were noted. No aircraft were sighted while vessel was in port or underway in the Black Sea.	
13.	Liberty Ashore One-third of the crew was allowed ashore. Passes were issued to crew members by the port authorities to be shown to gangway sentry upon going ashore and returning to vessel. Crew members found prices very high on
